Maths and Times Tables

How can I check if a number is divisible by 9?

If using your fingers is a simple way to find the multiplications facts for the 9 times table, there is also an easy way to check if an integer (a whole number) divides exactly by 9. If you add the digits in the number and they total 9 or a multiple of 9, such as 18, 27 or 36, then the number can be divided by 9 without a remainder.

For example, **621**

$$6 + 2 + 1 = 9$$

This means 621 is divisible by 9.

Apps ask for access to lots of things, ask an adult to help you decide.

just agree to it all or you won't be able to use the app.

I just signed up for a new app and it's asking me to agree to sharing lots of my information with them. Is this OK?

It depends on how much you want to use the app. Only agree if you are OK with doing so.

You shouldn't give away any of your information online as others might use it.
